Point 1.5 ST p care COMFORT
Point 1.5 ST p care PRIVATE
Point 1.5 ST p care ROYAL
Point 1.5 ST s care BASIC
Point 1.5 ST s care COMFORT
Point 1.5 ST s care PRIVATE
Point 1.5 ST s care ROYAL
Point 1.5 ST h care COMFORT
Point 1.5 ST h care PRIVATE
Point 1.5 ST h care ROYAL
Point 2.3 ST PRIVATE INTERNATIONAL

Preliminary remarks

Please see below for an explanation of terms.

Not all of the medicinal products and medical devices approved for sale in Switzerland and available in chemists are covered under mandatory basic health insurance. Supplementary insurance plans can therefore cover – or exclude – the costs of particular medicinal products and medical devices. The amount and exclusion of costs covered are governed by the provisions in the applicable terms of insurance.

The list of uninsured drugs and preparations contains drugs and preparations (or groups of drugs and preparations) that are not covered, or are only partially covered, by the supplementary insurance plans listed above.

This list is not exhaustive and can be changed by Sanitas at any time.

Given the quantities and constant change in the areas of medicinal products and medical devices, it is not possible to list all uninsured products by name. The following list of uninsured products therefore contains general exclusions (1) and exclusions broken down by class of active substance/indications (2), with an illustrative but not exhaustive list of the most common products. If a product is not mentioned by name, this does not automatically mean that it is covered by the supplementary plans.

Definitions

Medicinal products

Products of chemical or biological origin which are intended to have or are presented as having a medicinal effect on the human or animal organism, in particular in the diagnosis, prevention or treatment of diseases, injuries and handicaps; blood and blood products are also considered to be medicinal products (Art. 4 Federal Act on Medicinal Products and Medical Devices [HMG]).

Medical devices

Products, including instruments, apparatus, in vitro diagnostics, software and other goods or substances which are intended to have or are presented as having a medical use and whose principal effect is not obtained with a medicinal product (Art. 4 Federal Act on Medicinal Products and Medical Devices [HMG]).

Dietary supplements

Dietary supplements are products containing vitamins, minerals or other substances with a nutrition-specific or physiological effect in concentrated form that are used for the purpose of supplementing nutrition with these substances. They are available as capsules, tablets, liquids or powders. Dietary supplements are therefore foodstuffs designed to supplement general nutrition and offered in dose form.

Functional foods

Functional foods are foods with a specific additional benefit over and above the basic nutritional or physiological benefit of the nutrients they contain. Besides satisfying hunger and providing nutrients, they are presented as boosting physical well-being.

Foods

Foods are defined as nutritional products and luxury foods rather than as medicinal products (Art. 3 Federal Act on Foodstuffs and Utility Articles [LMG/FSA]).

Artificial nutrition

Artificial nutrition falls into the two categories of enteral and parenteral nutrition:

- **Enteral nutrition**, whereby nutrition is supplied via the gastrointestinal tract using a tube (e.g. disorders of the oesophagus, inability to swallow, etc.).
- **Parenteral nutrition** refers to the intravenous infusion of nutrition (carbohydrates, fatty acids, amino acids, electrolytes, vitamins, trace elements) directly into the bloodstream.

Under certain conditions, artificial nutrition is covered by mandatory basic health insurance.

Uninsured drugs and preparations

1. General exclusions

The following medicinal drugs and preparations are not covered under the above supplementary insurance plans:

- Products included in the list of pharmaceutical products for special application (www.lppv.ch)
- Products (including newly approved products and products from abroad) which belong to the same class of active substance or are licensed or used in the same area of indication as the products on the list below.
- Products used outside the scope of the medicinal product information approved by Swissmedic
- Products whose approval has been suspended or rejected by Swissmedic for safety reasons
- Dietary supplements and functional foods
- Diabetic foodstuffs
- Enteral nutrition with or without tube (e.g. Ensure plus, Fresubin Energy Drink, Nutridrink for oral nutrition)
- Parenteral nutrition

- Medicinal products subject to limitations on the list of drugs and special therapies that are used outside the scope of this limitation (regardless of whether they meet the conditions specified in Art. 71a of the Health Insurance Ordinance [KVV/OAMa])
- Products used in complementary medical methods (e.g. homoeopathy, natural medicine), unless the applicable supplementary terms explicitly specify that cover is provided.

For each product, within one year of therapy only costs of up to CHF 50,000 will be covered under the above supplementary insurance plans.

2. Exclusions by class of active substance/area of indication

Class of active substance/area of indication

Examples (not exhaustive)

Medicinal products for functional gastrointestinal disorders – Products for digestive disorders	– Carvon tablets – Luvos healing earth – Imogas capsules
